

Teacher: _____

Date: _____

Standards for Mathematical Practice: Second Grade

<p>1. Make sense of problems and persevere in solving them.</p> <ul style="list-style-type: none">• Can find an entry point or way to start the task.• Does my answer make sense?• Can reexamine the task in a different way.• Are expected to persevere while solving tasks.	<p>2. Reason abstractly and quantitatively.</p> <ul style="list-style-type: none">• Students make sense of quantities and relationships.• Processes of reasoning also apply as students begin to measure with standard measurement units by determining length of quantities.• What does it mean when...
<p>3. Construct viable arguments and critique the reasoning of others.</p> <ul style="list-style-type: none">• Students can accurately use definitions to construct arguments.• Students can constructively critique the strategies and reasoning of their classmates.• What do you think about what ____ said?	<p>4. Model with mathematics.</p> <ul style="list-style-type: none">• Students model real-life math situations with a number sentence or equation.• Can create an appropriate problem situation from an equation.• How can we use symbols to represent what's happening?
<p>5. Use appropriate tools strategically.</p> <ul style="list-style-type: none">• Students have access and use appropriately the following tools: base ten blocks, calculators, virtual manipulatives that support higher order thinking skills.• Students are able to determine their appropriate use.• How did using the tool help you solve the problem?	<p>6. Attend to precision</p> <ul style="list-style-type: none">• Students are precise in their communication, calculations, and measurements.• Use grade level vocabulary accurately.• Students check their work for accuracy.• Can you tell me why that is true?
<p>7. Look for and make use of structure.</p> <ul style="list-style-type: none">• Students look for patterns and structures in the number system• While working in the Numbers in Base Ten domain, students work with the idea that 10 ones equals a ten and 10 tens equals 100.• How do you know your rule will work?	<p>8. Look for and express regularity in repeated reasoning.</p> <ul style="list-style-type: none">• Students begin composing and decomposing numbers in different ways.• There are 8 crayons in a box. Some are red and some are blue. How many of each could there be?• Students can check for the reasonableness of their solutions during, and after completing a task.
