## Standards for Mathematical Practice: Fourth Grade

<p><b>1. Make sense of problems and persevere in solving them.</b></p> <ul style="list-style-type: none"><li>• Students know that doing math involves solving problems and discussing how they solved them.</li><li>• What do you know that is not stated in the problem?</li><li>• Can reexamine the task in a different way.</li><li>• Are expected to persevere while solving tasks.</li><li>• Listen to the strategies of others.</li></ul>	<p><b>2. Reason abstractly and quantitatively.</b></p> <ul style="list-style-type: none"><li>• Students recognize that a number represents a specific quantity.</li><li>• They extend this understanding from whole numbers to fractions and decimals.</li><li>• Students can decontextualize by taking a real-world problem and writing and solving equations based on the word problem.</li><li>• Students write simple expressions, record calculations with numbers, and round numbers using place value.</li></ul>
<p><b>3. Construct viable arguments and critique the reasoning of others.</b></p> <ul style="list-style-type: none"><li>• Students can construct arguments using concrete representations such as objects or drawings.</li><li>• Students can constructively critique the strategies and reasoning of their classmates.</li><li>• What do you think about what ____ said?</li><li>• Can you explain why his/her strategy worked?</li></ul>	<p><b>4. Model with mathematics.</b></p> <ul style="list-style-type: none"><li>• Students represent problem situations in various ways.</li><li>• Can evaluate their results in the context of the situation and reflect on whether the results make sense.</li></ul>
<p><b>5. Use appropriate tools strategically.</b></p> <ul style="list-style-type: none"><li>• Students consider the available tools (including estimation) when solving a math problem.</li><li>• Students are able to determine their appropriate use.</li><li>• How did using the tool help you solve the problem?</li></ul>	<p><b>6. Attend to precision</b></p> <ul style="list-style-type: none"><li>• Students are precise in their communication, calculations, and measurements.</li><li>• They are careful about specifying units of measure and state the meaning of the symbols they choose.</li><li>• Students check their work for accuracy.</li><li>• Can you tell me why that is true?</li></ul>
<p><b>7. Look for and make use of structure.</b></p> <ul style="list-style-type: none"><li>• Students closely examine numbers to discover a pattern or structure.</li><li>• Students generate number or shape patterns that follow a given rule.</li><li>• How do you know your rule will work?</li></ul>	<p><b>8. Look for and express regularity in repeated reasoning.</b></p> <ul style="list-style-type: none"><li>• Students begin composing and decomposing numbers in different ways.</li><li>• Students notice repetitive actions to make generalizations.</li><li>• Students use models to examine patterns and generate their own algorithms.</li></ul>
